

How did the Corona virus affect your lifestyle since the beginning?

The corona virus affected the whole world and for sure the recovery from that would be drastically slow. My first lifestyle problem due to the outbreak of the Corona virus was the decrease in the number of ways I could go out with my close relatives and lack of hugs and handshakes. The other problem is the trouble of sanitizing every surface that I touch and the worse one wearing the face mask every time I leave the house.

However, I must admit that as a software developer nothing special happened to the way I was doing my job because there is only me and my laptop and nothing in between when I do my job and there would be no risk of getting infected by staying in home.
